
Contents

1. **Biology and living things**

Methods of inquiry in Biology

Control in scientific experiments

Usefulness of science

Characteristics of living things

Classification of living things

Kingdoms of living things

Kingdom Monera

Kingdom Protista

Kingdom Fungi

Plant kingdom

Animal kingdom

Organization of life

Complexity of organization in higher organisms

Suggested practicals

Summary

Revision questions

2. **Plant nutrition**

Photosynthesis

Mechanism of photosynthesis

Materials and conditions necessary for photosynthesis

Evidence of photosynthesis

Importance of photosynthesis

Mineral element requirement of plants

The nitrogen cycle

Suggested practicals

Summary

Revision questions

3. **Animal nutrition**

Food substances

Importance of food

Classes of food substances

Balanced diet

Food tests

Digestive enzymes
Suggested practicals
Summary
Revision questions

4. Modes of nutrition

Autotrophic nutrition
Photosynthetic nutrition
Chemosynthetic nutrition
Heterotrophic nutrition
Holozoic nutrition
Parasitic nutrition
Symbiotic nutrition
Saprophytic nutrition
Carnivorous plants
Suggested practicals
Summary
Revision questions

5. Basic ecological concepts

Ecological concepts
Components of an ecosystem
Biotic communities in Nigeria
Population studies
Sampling of population
Factors that affect population
Ecological factors
Importance of some ecological factors to population
Relationship between soil types and water-holding effects of soil on vegetation
Effect of soil water on vegetation
Simple measurement of ecological factors
Suggested practicals
Summary
Revision questions

6. Functioning ecosystem

Autotrophs and heterotrophs
Food chain and food web
Energy flow
Energy transformation in nature
Laws of thermodynamics
Nutrient cycling in nature
The carbon cycle
Importance of carbon
The water cycle
Importance of water
Decomposition in nature
Role of decomposers

Suggested practicals

Summary

Revision questions

7. Ecological management and conservation

Associations

Adaptation to environmental factors

Adaptation of plants to aquatic habitat

Adaptation of plants to terrestrial habitat

Adaptation of animals to aquatic habitat

Adaptation of animals to terrestrial habitat

Morphological adaptations of fish to aquatic habitat

Morphological adaptations of tadpole to aquatic life

Adaptations of the chameleon

Tolerance

Geographic range

Pollution of the atmosphere

Air pollutants

Effects of air pollutants

Water pollution

Effects of oil spillage

Soil pollution

Conservation of natural resources

The need for conservation

Ways of ensuring conservation

Benefits of conservation

Ways of conserving forests

Suggested practicals

Summary

Revision questions

8. Micro-organisms around us

Groups of micro-organisms

Concept of culturing

Culture solution preparation

Identification of micro-organisms

Micro-organisms in our bodies and food

Micro-organisms in our food

Modes of transmission of germs

Carriers of micro organisms

Growth of micro-organisms

Effects of micro-organisms

Plant diseases

Animal diseases

Suggested practicals

Summary

Revision questions

9. Towards better health

Control of micro organisms

Vectors

Ways of controlling vectors

Maintenance of good health (public health)

Functions of Local Public Health Authority

Health organizations

Suggested practicals

Summary

Revision questions

10. Relevance of Biology to agriculture

Classifications of plants

Effects of agricultural activities on ecological systems

Pests and diseases of agricultural importance

Control of plant pests

Animal pests

Some plant diseases

Some animal diseases

Food production and storage

Ways of improving crop yields

Causes of wastage

Methods of preserving and storing food

Population growth and food supply

Factors affecting availability of food

Relationship between food availability and human population

Suggested practicals

Summary

Revision questions

Answers to objective questions

Glossary
