

# **CONTENTS**

## **CHAPTER 1 Energy, society and conservation principles**

Energy and Society

The renewable energy

Forms and uses of energy

Heating

Transportation

Power production

Photosynthesis

The effects of energy use in the environment

Friendly and hazardous energy sources

Changing energy to other form

Conservation of energy

Greenhouse effect

Greenhouse gases

Global warming

Ozone, ozone layer and global warming

Hazardous and friendly energies

Energy crisis

Summary

Questions

## **CHAPTER 2 Wave properties and electromagnetic waves**

Properties of waves

Diffraction of waves

Interference of waves

Principle of superimposition

Constructive interference

Destructive interference

Interference of water waves

Interference of light waves

How to measure the wavelength of light

Colour and wavelength

Polarization of waves

Mechanical analogue of polarization

Ways of producing plane-polarized light

Detection of plane polarized light

Summary

Practice Questions 2n

Electromagnetic waves

Radio waves

Microwaves

Infrared waves

Ultraviolet rays

X-rays

Gamma rays

Summary

Practice questions 2b

## CHAPTER 3 Gravitational fields

Universal gravitation

Newton's law of universal gravitation

Gravitational field

Gravitational field strength or intensity

Variation of gravity( $g$ ) with distance ( $r$ )

Variation of gravity( $g$ ) with height ( $h$ )

Gravitational potential ( $V$ )

The velocity of escape ( $v$ )

Geostationary or parking orbits

Summary

Practice questions 3

Solar system

The terrestrial or inner planets

The jovian or outer planets

Dwarf planets

Planetary motion and Kepler's law

Natural and artificial satellites

Rockets

Rocket's propellants

Staging

NigeriaSat-1

NigeriaSat-2

Summary

Question

Past question

## CHAPTER 4 Electric field

Electric force between point charges

Coulomb's law

Electric field

Electric field line

Electric field intensity (strength)

The magnitude of electric field intensity

Electric potential

Types of electric potential

Potential difference (p.d)

Relationship between electric field strength (E) and potential difference (V)

Summary

Practice question 32a

Types of capacitors

Air-dielectric capacitor

Uses of capacitors

Capacitance of capacitor

Capacitance of a parallel plate capacitor

Factors which determine the capacitance of a parallel plate capacitor

Energy stored in a capacitor

Arrangement of capacitors

Summary

Practice question 2b

Past questions

## CHAPTER 5 Magnetism and Electromagnetism

Magnetism

Properties of magnets

Magnetic induction

Magnetic and non-magnetic materials

Soft and hard magnetic materials

Temporary and permanent magnet

Test for a magnet

Theory of magnetism

Domains

Magnetic saturation

Source of atomic magnetism

Diamagnetic materials

Paramagnetic materials

Ferromagnetic materials

Methods of making magnets or magnetization

How to find the poles of the magnet produced

Single touch or stroke method

Demagnetization

**Summary**

**Practice question 5a**

Magnetic field of the earth

Direction of earth's magnetic field

Angle of variation or declination

Angle of dip inclination

Vertical and horizontal components of earth's magnetic field

Interaction of earth's magnetic field and bar magnets

Magnetic screening or shielding

**Summary**

**Practice question 5b**

**Electromagnetism**

Magnetic field around a straight conductor with flowing through it

Rules for finding the direction of the magnetic field around a straight conductor carrying current

Magnetic field pattern of two straight conductor

The electromagnet

Uses of electromagnet

Electric bell

The telephone receiver

How the telephone receiver works

**Summary**

**Practice questions 5c**

The motor effect of electric current

The direction of the force

Force on a straight conductor carry current in a magnetic field

Direction of force or motion

The size or magnitude of the force

Interaction of the two fields

Force on a rectangular coil

Application of motor effect of current

The moving coil meters

The working of a moving coil meter

Sensitivity of moving coil meters

Advantage of moving coil meters

Disadvantages of moving coil meters

The electric motor

The working of direct current (d.c) motor

Practical d.c motors

The moving-coil loudspeaker

How the moving-coil loudspeaker works

**Summary**

## Practice questions 5d

Past question

### CHAPTER 6 Electromagnetic induction

Electromagnetic induction

Production of electric current

The magnitude of induced current or voltage (e.m.f)

The direction of the induced current or e.m.f

The laws of electromagnetic induction

Lenzâ€™s law and conservation of energy

Eddy current

Damping effect of eddy current

Uses of eddy current

Disadvantages of eddy current

Reduction of eddy current

The generator

Why the induced current/voltage is an alternating one

Direct current generator

Factor affecting e.m.f produced by generator

Measurement of a.c current

Summary

#### Practice question 6a

Stepping up and stepping down voltages

Self-inductance (L)

Inductors or chokes

Mutual induction

Uses of mutual induction

The induction coil

The transformer

Efficiency of transformers

Step up and step down transformers

Energy losses in transformers

Transmission of electrical power over long distances

Advantages of high-tension transmission

Summary

#### Practice question 6b

Past question

### CHAPTER 7 Alternating current circuit

Alternating current

Peak, average and root mean square values of an alternating current (a.c)

The root mean square (r.m.s) value  
Proof of the root mean square value  
Alternating current through a pure resistor  
Alternating current through a pure inductor  
Inductive reactance  
Alternating current through a pure capacitor  
Capacitive reactance  
Resistor and capacitor in series (R-C circuit)  
Resistor inductor and capacitor in series (R-L-C circuit)  
Summary  
Practice questions 7  
Past questions

**CHAPTER 8 Models of the atom**  
Build up to modern atomic concept  
Atomic models  
Thomson atom  
Alpha scattering experiment  
Rutherford atom  
Limitation of Rutherford atom  
The quantum idea  
Bohr atom  
Limitation of Bohr atom  
Line spectra of hydrogen atom  
Electro cloud model  
Electronic configuration and behavior of elements  
Periodic table and chemical properties of elements  
Chemical properties  
Summary  
Practice questions 8  
Past questions

**CHAPTER 9 Nuclear energy**  
Radioactivity  
The Nucleus  
Isotopes  
Changes in the nucleus  
Radioactive nuclide (element)  
Properties of radioactive radiations  
Summary  
Radioactive decay

Decay by ejecting B-particles  
Gamma – emission  
Half-life  
Decay curve  
Splitting the atom  
Useful application of radioactivity  
Health hazard of Radioactivity  
Safety Precaution  
Summary  
Practice questions 9

Nuclear reaction  
Nuclear energy  
Advantages of nuclear energy  
Disadvantages of nuclear energy  
Nuclear fission  
Chain reaction  
Critical mass  
Nuclear reactor  
Nuclear fusion  
Advantages of fusion over fission reaction  
Nigerian nuclear energy programme  
Nuclear energy calculation  
Binding energy  
Mass defect  
Einstein Mass-energy relation  
Atomic mass unit  
Electron-volt  
Summary  
Practice question 9b

**CHAPTER 10 Energy quantization**  
Energy levels in atoms  
Excitation and ionization energies  
Colour and light frequency  
Atomic spectra  
Types of atomic spectra  
Absorption spectra  
Franck and Hertz experiment  
Summary  
Practice question 10a  
Photoelectric effect  
Photoemission

Factor affecting the emission of photoelectrons

Einsteinâ€™s explanation of photoelectric effect

Work function

Stopping potential

Determination of Planckâ€™s constant

Photocell

Summary

Practice questions 10b

X-rays

Production of x-rays

Intensity of X-rays

Quality of X-rays

Properties of X-rays

Uses of X-rays

Summary

Practice questions 10c

Past questions

## CHAPTER 11 Wave-particle paradox

Wave nature of light

Particle or corpuscular nature of light

Evidence of particle nature of light

Wave nature of matter

Electron diffraction

Wave-particle duality

Heisenberg uncertainty principle

Summary

Practice questions 11

Past questions

## CHAPTER 12 Fundamentals of Electronics

Semiconductors

Differences between conductors, insulators and semiconductors

Conductors

Insulators

Semiconductors

Forward and reversed bias of semiconductor diodes

The p-n junction diode I-V characteristics curve

Uses of semiconductor

Full wave rectification

Transistors

[Transistor connection](#)

[Summary](#)

[Practice question 12](#)

[Past question](#)

[Appendix-1](#)

[Appendix-2](#)

[Appendix-3](#)

[Solution to Questions](#)
